

PRESS RELEASE

Paris, February 8th, 2019

INFRAM ENERGY and AMARENCO successfully close the first tranche of a large financing program mixing both brownfield and greenfield solar assets.

On February 1st, 2019, INFRAM ENERGY and AMARENCO reached financial close of the first facility of an integrated group financing program, comprising a revolving construction finance facility of 35 M€ and a long-term refinancing facility for operational solar assets of ca. 120 M€.

INFRAM ENERGY (“Infram”) is a solar platform jointly owned by the UK infrastructure fund INFRACAPITAL and AMARENCO. AMARENCO acts as principal management services provider to Infram on all development, financing, construction and operational aspects of Infram’s business.

INFRAM ENERGY is advised on this transaction by FINERGREEN acting as financial adviser and with LPA-CGR acting as legal adviser.

The construction facility was closed with German lender LANDESBANK SAAR (SaarLB). It will provide Infram with a streamlined and flexible financing solution to bridge long term project finance from early development to post commissioning for Infram’s pipeline of close to 100 MWp of multiple solar assets, including past and upcoming CRE-4 awarded SPVs.

INFRAM ENERGY expects to finalise the restructuring and refinancing of its 70MW operating portfolio, combining ground mounted, agricultural barns and greenhouses solar assets in the course of the coming weeks.

Nick Howard, CFO at AMARENCO, commented: *"This transaction represents an important milestone in Infram’s evolution and will significantly enhance Infram’s ability to achieve its objectives of efficiency and competitiveness in the financing of its rapidly growing portfolio in France."*

Théo Barallon, Manager at FINERGREEN, added: *"We are delighted to have closed this new facility which will bring a lot of value to our client. Developers active in the small rooftop space are facing the same issue: securing long term project finance could be a burden when portfolios are disparate or when financing is bottlenecking the road to COD, and therefore putting tariffs at risk."*

Marc Weber, Head of Project Finance France at SaarLB, said: *“We are very pleased to have been chosen as financial partner and to contribute to the structuring of this tailor-made financing solution for our client Infram Energy. The solution found demonstrates the quality and the potential of flexible financing approaches in the project finance sector, especially for renewable energy projects. We would like to thank all parties and the advisors involved in this deal for their professionalism and ambition, in particular the Amarenco, Infram and Finergreen teams.”*

About INFRAM ENERGY

Infram Energy is a renewable energy investment platform established in 2017 between Infracapital's Greenfield Fund and Amarenco. The platform comprises c.85 MW of operational solar assets and a pipeline of c.100 MW of development and construction assets in France. Infram Energy intends to add 100MW, annually, of renewable assets to its portfolio over the next three to five years through a combination of development asset pipeline and asset acquisitions.
